

# EREPEATERZB

Repeater ZigBee

The device increases the range of the ZigBee 3.0 wireless network in a control system based on ENGO EGATEZB gateway. It is useful where wireless connectivity is weak because of distance or obstacles (concrete walls, reinforced ceilings, etc.). Repeater is an addition to the system and does not work independently. For its proper operation, a ZigBee 3.0 gateway (EGATEZB) is required, available in the offer.

## Technical Informations

|                 |                   |
|-----------------|-------------------|
| Power supply    | 230V AC 50Hz      |
| Communication   | ZigBee 3.0 2,4GHz |
| Dimensions [mm] | 40 x 24 x 82      |
